

# ServoPos 3

## Swift positioning of hydraulic servo systems

ServoPos 3 can control up to 30 axes in a CPU. The overriding system communicates only with the master unit, which in turn communicates with the sub-nodes via EtherCAT. It is easy to replace an existing servo system with ServoPos 3 as the latter supports in principle all types of positioning feedback systems and hydraulic servovalves. ServoPos 3 comes with a state-of-the-art operator interface with userfriendly menus and integrated documentation.

## ServoPos 3

- Flexible system
- Easy to install
- Built-in functions for most applications
